

World Tourism Barometer

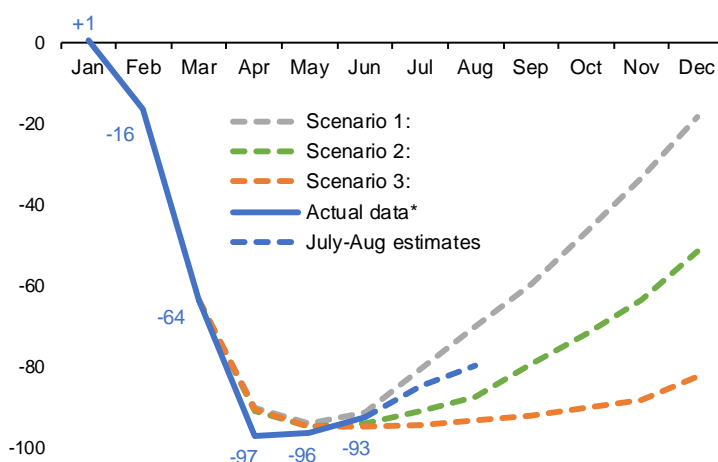

Volume 18 • Issue 5 • August/September 2020

International tourism down 65% in first half of 2020

- International tourist arrivals (overnight visitors) declined 65% in the first half of 2020 over the same period last year, with arrivals in June down 93%, according to data reported by destinations.
- Despite the gradual reopening of an increasing number of destinations during the second half of May and the month of June, ahead of the Northern Hemisphere summer season, the expected improvement in June was almost unperceived compared to May.
- The massive fall in international travel demand during the first half of 2020 translates into a loss of 440 million international arrivals and about USD 460 billion in export revenues from international tourism. This represents over five times the loss in receipts recorded in 2009 amid the global economic and financial crisis.
- The contraction in international demand is also reflected in double-digit declines in international tourism expenditure. Major outbound markets such as the United States and China continue to be at a standstill, though some markets such as France and Germany have shown some improvement in demand for international travel in June.
- While the recovery of international tourism remains sluggish, demand for domestic tourism is rising in many large markets such as China where air capacity in July rebounded to around 90% the level of 2019. In Russia air capacity has also been underpinned by rising domestic travel.

- Based on the three UNWTO scenarios published in May 2020 pointing to declines of 58% to 78% in international tourist arrivals in 2020, current trends suggest a decline in international arrivals closer to 70% for 2020.
- Extended scenarios for 2021-2024 point to a strong rebound in the year 2021 based on the assumption of a reversal in the evolution of the pandemic, significant improvement in traveller confidence and major lifting of travel restrictions by the middle of the year. Nonetheless, the return to 2019 levels in terms of international arrivals would take 2½ to 4 years.

International tourist arrivals in 2020: YTD results and scenarios (y-o-y monthly change, %)

About the *UNWTO World Tourism Barometer*

The *UNWTO World Tourism Barometer* is a publication of the World Tourism Organization (UNWTO) that monitors short-term tourism trends on a regular basis to provide global tourism stakeholders with up-to-date analysis on international tourism.

The information is updated several times a year and includes an analysis of the latest data on tourism destinations (inbound tourism) and source markets (outbound tourism). The Barometer also includes a Confidence Index based on the UNWTO Panel of Tourism Experts survey, which provides an evaluation of recent performance and short-term prospects on international tourism.

The UNWTO Secretariat wishes to express its gratitude to those who have contributed to the production of this *UNWTO World Tourism Barometer*, in particular to institutions that supplied data, and to the members of the UNWTO Panel of Tourism Experts for their valuable feedback and analysis.

This report was prepared by the **UNWTO Tourism Market Intelligence and Competitiveness Department**, under the supervision of Sandra Carvão, Chief of the Department. Contributors include (in alphabetical order): Fernando Alonso, Michel Julian, and Javier Ruescas.

For more information including copies of previous issues, please visit: www.e-unwto.org/loi/wtobarometereng

We welcome your comments and suggestions at barom@unwto.org.

Data collection for this issue was closed early September 2020.

The next issue of the *UNWTO World Tourism Barometer* with more comprehensive results is scheduled to be published in October 2020

The document is available from the UNWTO elibrary at www.e-unwto.org. This release is available in English, while the Statistical Annex is provided in English, French, Spanish and Russian.

Inbound tourism: January-June 2020

International arrivals declined 65% in January-June 2020

- International tourist arrivals (overnight visitors) saw a decline of 65% in the first half of 2020 over the same period of last year, with arrivals in June down by 93%, according to data available.
- International arrivals decreased an unprecedented 95% during the second quarter of the year, following a drop of 28% in the first quarter. Results reflect widespread travel restrictions and lockdowns in nearly all destinations worldwide, mostly from the second half of March and the months of April (-97%) and May (-96%) amid measures to contain the spread of the COVID-19 pandemic.
- Despite the gradual reopening of an increasing number of destinations during the second half of May and the month of June, ahead of the Northern Hemisphere summer season, the expected improvement in June was almost unperceived compared to May.
- By contrast, some large European destinations reporting data for June such as Austria, the Netherlands, Germany or Croatia, saw a slight improvement in arrivals compared to May, further to the gradual reopening of borders across the European Union, which helped intraregional travel.
- The massive fall in international travel demand during the first half of 2020 translates into a loss of 440 million international arrivals and about USD 460 billion in export revenues from international tourism. This represents over five times the loss in receipts registered in 2009 amid the global economic and financial crisis.
- According to preliminary estimates for July (-85%) and August (-80%), the decline in international demand in January-August 2020 would reach 70% and translate into a loss of 705 million international arrivals and some US\$ 730 billion in export revenues, 8 times the income loss of 2009.
- By regions, Asia and the Pacific, the first region to suffer the impact of COVID-19, saw a 72% decrease in arrivals in the first half of 2020. The second-hardest hit was Europe with a 66% decline, followed by the Americas (-55%), Africa and the Middle East (both -57%).
- At the subregional level, North-East Asia (-83%) and Southern Mediterranean Europe (-72%) recorded the largest declines in international arrivals. Most subregions worldwide saw declines of more than 50% in the first half of the year.
- The contraction in international demand is also reflected in double-digit declines in international tourism expenditure among large markets. Major outbound markets such as the United States and China continue to be at a standstill, though some markets such as France and Germany have shown some improvement in June.
- While the recovery of international tourism remains sluggish, demand for domestic tourism is rising in many large markets such as China where air capacity offered in July rebounded to around 90% the level of 2019. In Russia air capacity has also been underpinned by rising domestic travel.
- According to [UNWTO's seventh report on travel restrictions](#) as of 1 September 2020 a total of 115 destinations (53% of all destinations worldwide) had eased COVID-19 related travel restrictions for international tourism. This is an increase of 28 destinations compared to 19 July 2020.

UNWTO BRIEFING NOTE SERIES: TOURISM AND COVID-19

Issue 3: Understanding Domestic Tourism and Seizing its Opportunities

As the world's tourism turns to domestic travel to boost the restart and recovery of the sector in times of the COVID-19 pandemic, this briefing note aims to analyse the global domestic tourism market and provide policymakers and the tourism sector at large with examples of initiatives implemented around the world to promote domestic travel and restore confidence.

International air demand slowly recovering but still well below 2019 levels

- **IATA** indicates that global air passenger demand dropped 67% in January-July 2020 and is slowly recovering from its April low. Demand declined 92% in July year-on-year (y-o-y), which represents only a slight improvement over the 97% drop recorded in June as most international routes remained closed or had reduced flight frequencies. An increase in COVID-19 cases in several countries led to a re-imposition of travel restrictions. Market reopening in the Schengen area helped to boost international demand in Europe, but other international markets showed little change compared to June.
- A small recovery in global air demand continues to be driven primarily by domestic markets, most notably Russia and China.
- **ICAO** indicates that international air capacity worldwide fell by 59% y-o-y in January-July 2020

measured in available seat-kilometres. International capacity in July (-75%) improved from the decline recorded in June (-88%). However, load factors remained much lower (46%) than 2019 levels, as the decline in traffic was stronger than the reduction in capacity.

- According to **STR**, the hotel industry continued to suffer double-digit declines in the three metrics, namely revenue per available room (RevPAR), average daily rate (ADR) and occupancy, with performance at low levels across all world regions in July 2020. Occupancy in July reached record lows of 17% in Africa, 19% in Central and South America, 27% in Europe, 35% in the Middle East, 46% in Asia and the Pacific and 47% in the United States.

Current trends point to a decline in international arrivals closer to 70% for the whole of 2020

- Based on the three UNWTO scenarios published in May 2020 indicating declines of 58% to 78% in international tourist arrivals in 2020, current trends point to a decline in international arrivals closer to 70% (Scenario 2). The expected reopening of several destinations in June was mostly limited to the European Union, while borders remained fully closed in 43% of the world's destinations as of 1 September. Furthermore, many destinations have reintroduced travel restrictions after the resurgence of COVID-19 outbreaks. As a result, Scenario 1 (-58%) seems unlikely if current trends remain.
- The outlook remains highly uncertain due to the evolution of the pandemic and the possibility of a future vaccine. Consumer confidence is at record lows, while the deteriorating economic environment is having a negative impact on jobs and disposable income. Travel restrictions are still in place in many destinations and virus containment is slow. Some 29 million COVID-19 confirmed cases worldwide have been reported to date, according to the World Health Organization.
- Extended scenarios for 2021-2024 point to a change in trend next year, based on the assumptions of a gradual and linear lifting of travel restrictions and a

significant rebound of traveller confidence by mid-2021, given a reversal in the evolution of the pandemic and the availability of a vaccine or effective treatment. Nonetheless, it would take 2½ to 4 years for international tourist arrivals to return to 2019 levels.

- In view of supporting a safe restart of tourism, an increasing number of destinations are putting in place different measures including safety and hygiene protocols, targeted marketing and promotion campaigns, tourism recovery plans, the promotion of domestic tourism, the ease of travel restrictions, the provision of travel insurance or the creation of travel corridors or bubbles.
- UNWTO calls for the need to reopen tourism in a responsible, safe, coordinated and seamless manner, as travel restrictions are lifted. Restoring confidence and trust in the sector remains crucial.

Regional insights

Europe

- International tourist arrivals in Europe, the world's most visited destination, were down 66% in the first half of 2020 over the same period last year, with a 97% drop in the second quarter. Widespread travel restrictions and lockdowns in nearly all destinations during the second half of March and the months of April and May weighed heavily on the results of the first half of the year.
- Results in June (-90%) showed only a slight improvement compared to May (-96%), reflecting a very slow and irregular reopening of borders mostly in the European Union by mid-June.
- Some large European destinations reporting data for June such as Austria, the Netherlands, Germany or Croatia, saw a slight improvement in arrivals compared to May, further to the gradual reopening of borders across the European Union, which helped intraregional travel.
- Domestic tourism has resumed in many European countries, driving overall tourism demand in those with large domestic markets and reflecting a still cautious attitude toward cross-border travel.
- Europe suffered a loss of 213 million international arrivals through June, compared to the same period in 2019.
- By subregion, international arrivals fell an estimated 72% in Southern and Mediterranean Europe and 64% in Northern Europe this six-month period. A slight improvement during the month of June helped to slow down the pace of decrease in arrivals in Western Europe (-63%) and Central and Eastern Europe (-62%).
- Despite the gradual reopening of destinations across the European Union starting in June, travel restrictions or quarantines were re-imposed in July by a number of countries amid a resurgence of cases, affecting destinations that had recently opened their borders.
- As of 1 September of 2020, 44 destinations in Europe, including 25 out of 26 Schengen Member States had eased travel restrictions, according to UNWTO's seventh report on travel restrictions. Europe is the region with the highest number of destinations easing restrictions so far (81%).

- Non-essential travel from third countries into the EU was temporarily restricted on 16 March and extended further. On 30 June the European Council adopted a recommendation for the gradual lifting of the temporary restrictions on non-essential travel from third countries into the EU. According to the European Council, travel restrictions should be lifted for countries listed in the recommendation as from 1 July. Upon revision by Member States and the Council, the list is reviewed every two weeks. (https://ec.europa.eu/info/live-work-travel-eu/health/coronavirus-response/travel-and-transportation-during-coronavirus-pandemic_en#travel-restrictions).
- On 4 September, the Commission has adopted a proposal for a Council Recommendation to ensure that any measures taken by Member States that restrict free movement due to the coronavirus pandemic are coordinated and clearly communicated at the EU level (https://ec.europa.eu/commission/presscorner/detail/en/ip_20_1555)

Air travel and accommodation indicators

- International passenger demand in Europe measured in revenue passenger kilometres (RPKs) plunged 68% in January-July 2020, according to **IATA**. Demand improved in July (-87%) from a 97% drop in June, reflecting the relaxation of travel restrictions in the Schengen area and a rise in traffic within Europe. Traffic capacity dropped 79% and load factor fell to 55%.
- The upturn in traffic demand is reflected on the increase of daily flights reported by **Eurocontrol**: on 31 July, 54% less daily traffic was reported.
- The gradual reopening across the region was also felt in the accommodation sector, but with low performance, according to **STR**. Europe posted a decrease of 66% in revenue per available room (RevPAR, in euro constant currency) in July. Occupancy recorded a 66% drop to 27% and Average Daily Rate (ADR) fell 21% in July to euro 96. The absolute occupancy and RevPAR levels were up from June but remained the lowest for any July on record in Europe

Asia and the Pacific

- Asia and the Pacific recorded 72% fewer international tourist arrivals in January-June 2020 or a loss of 171 million compared to the same period last year.
- Asia and the Pacific was the first region to be impacted by COVID-19 and the massive drop of international demand was already felt in February. International arrivals fell 99% in the second quarter following a massive 52% decline in the first quarter.
- North-East Asia (-83%) recorded the largest decrease among world subregions in the first half of 2020, according to available data. South-East Asia followed with a 64% decline, while Oceania and South Asia recorded a drop of 58% and 55% respectively.
- Most destinations in Asia and the Pacific recorded declines in international arrivals close to 100% in June and July, reflecting travel restrictions to international travel amid efforts to contain virus outbreaks.
- As 1 September, there were 28 destinations in Asia and the Pacific (61%) with closed borders closed. Only 13 destinations in the region (including 5 Small Island Developing States) had eased restrictions.
- Outbound travel from China, the world's top source market and for many countries in Asia the main source of international visitors, remains at a halt. Domestic travel, by contrast, is showing dynamism, with domestic air capacity in China reaching 90% of July 2019 levels.
- Travel bubbles or corridors are starting to be put in place or planned among some countries in the region taking into consideration their epidemiological situation. On 1 September, Singapore opened a travel corridor with New Zealand and Brunei, allowing quarantine-free travel. Hong Kong (China) is discussing travel corridors with eleven destinations. Japan relaxed its re-entry restrictions to foreign residents on September 1st.

Air travel and accommodation indicators

- According to **IATA**, Asia and the Pacific recorded a 97% drop in international passenger traffic in July, virtually unchanged from a 97% drop in June, and the steepest contraction among regions. Capacity

fell 92% and load factor reached 35%. By contrast, China's domestic traffic has been recovering steadily and the country is one of the few domestic markets where load factors recovered from record lows.

- **STR** indicates that hotels in the Asia and the Pacific region reported occupancy fell 37% to 46% in July, ADR decreased 31% and RevPAR dropped 56%. The region reported continued improved performance from previous months but at overall low levels during July.

The Americas

- The Americas saw a 55% decrease in international tourist arrivals in the first six months of the year, weighed down by an estimated 93% drop in the second quarter amid COVID-19 and travel restrictions. The Caribbean (-58%) and South America (-52%) suffered the worst decline among subregions, while arrivals in Central America decreased by 56% in North America and 55%.
- The Americas have lost 59 million international arrivals in the period January-June year-on-year.
- Several Caribbean destinations have reopened in June and July further to the implementation of hygiene and health protocols, though connectivity from major source markets is still limited.
- As of 1 September, UNWTO identified 27 destinations in the Americas, including 18 Small Island Developing States (SIDS) which had eased restrictions, though borders remained closed in 41% of destinations in the Americas. The Americas is currently the region with most confirmed COVID-19 cases to date, according to the World Health Organization.
- The United States has extended the closure of its borders with Canada and Mexico to non-essential travel until at least 21 September. On 6 August, the Department of State lifted the Global Level 4 Health Advisory initially put in place on 19 March 2020, which advised US citizens to avoid all international travel due to the global scale of COVID-19. The Department of State is returning to the previous system of country-specific levels of travel advice, with levels from 1 to 4 depending on individual country conditions (www.state.gov/lifting-of-global-level-4-global-health-advisory).

- This could potentially resume demand from the United States, a major outbound market for many destinations across the region.
- 26 destinations in Africa and 5 destinations in the Middle East had eased restrictions as of 1 September, according to UNWTO's seventh report on travel restrictions. Borders in 27 destinations in Africa (51% of all destinations in Africa) and 8 destinations in the Middle East (62% of all destinations in the Middle East) remain closed.

Air travel and accommodation indicators

- According to **IATA**, international passenger demand in North America saw a 95% decline in July, a slight uptick from the 97% drop in June. Capacity fell 86% and load factor dropped to 35%, the second lowest among regions. International traffic in Latin America experienced a 95% drop in July, compared to the same month last year, versus a 97% drop in June. Capacity fell 93% and load factor reached 58% in Latin America, the highest among regions.
- **STR** indicates that the US hotel industry showed slightly better performance in July compared to the previous month, despite low levels overall. Occupancy dropped 36% to 47%, ADR declined 25% and RevPAR 52%. The absolute occupancy level was the lowest for any June on record in the US, but all three key metrics were up from June levels. The Central and South America hotel industry reported slight improvement y-o-y in July, but low performance overall. Occupancy declined 69% to 19%, while ADR dropped 34% and RevPAR 79%. The absolute occupancy and RevPAR levels were the lowest for any July.

Air travel and accommodation indicators

- **IATA** indicates that international traffic in Africa dropped 95% in July, improving somewhat from a 98% contraction in June. Capacity contracted 85%, and load factor fell to 25%, which was the lowest among regions.
- Middle Eastern airlines posted a 93% traffic decline in July, compared with a 96% demand drop in June. Capacity decreased 86%, and load factor dropped to 38%.
- According to **STR**, the Middle East hotel occupancy fell 42% to 35% in July, ADR decreased 10% and RevPAR dropped 47%. Africa's hotels saw occupancy fall 73% to 17%, ADR declined 11 and RevPAR dropped 76%. The Africa hotel industry suffered a decline of 76% in RevPAR in March 2020. Occupancy recorded a 52% drop to 31% and ADR fell by 6%. Despite month-over-month improvements, both the Middle East and Africa saw their lowest absolute occupancy and RevPAR levels for any July on record.

Africa and the Middle East

- International tourist arrivals in Africa declined 57% in the first half of 2020, with an estimated 99% drop in the second quarter. North Africa (-62%) suffered the biggest impact in the first half, while arrivals in Sub-Saharan Africa declined an estimated 54%. Africa lost an estimated 18 million international arrivals y-o-y through June. Among the very few countries reporting data for June and July, Tunisia recorded a slight improvement in July.
- The Middle East saw a 57% decrease in January-June 2020 and has lost 19 million international tourist arrivals compared to the same period of the previous year. Major destinations such as Saudi Arabia and Egypt are restarting tourism. Egypt has resumed international flights on 1 July after three months of suspension while the campaign 'Saudi Summer' was launched to stimulate domestic tourism in Saudi Arabia.

Forward-looking Scenarios for 2020 and beyond

Scenarios for 2020

Three scenarios for international tourism in 2020 were presented in the May 2020 *UNWTO World Tourism Barometer*, which described alternative recovery paths after the global lockdown, based on possible lifting of travel restrictions in July, September and December 2020. They assumed no significant or long-lasting worsening of travel conditions thereafter.

Considering that international tourist arrivals declined an estimated 85% in July and 80% in August 2020 based on currently available information and the slow and irregular lifting of travel restrictions, international tourism results are currently between **Scenarios 1 and 2**.

International travel came to a near complete halt after the shutdown of most international borders in late March, with arrivals plunging 97% in April and 96% in

May, according to data reported by destinations. The curve seems to have bottomed out during those months before edging up slightly to -93% in June and an estimated -85% in July.

Scenario 1 now seems unlikely despite the lifting of travel restrictions in some countries in June and July, as this was mostly limited to Europe and proved to be short-lived. In July and August several European destinations reintroduced quarantines and other measures in response to growing cases of Covid-19. By mid-September these restrictions had not been lifted in the most part, and major international tourist destinations in other parts of the world such as China and the United States remained closed.

International tourist arrivals in 2020: YTD results and scenarios (y-o-y monthly change, %)

* Actual data through June includes estimates for countries which have not yet reported monthly results. Dotted blue line corresponds to UNWTO estimates for July and August 2020.

Extended scenarios for 2021-2024

In the outlook beyond 2020, the above scenarios were extended into the future based on the latest information on tourism trends and travel conditions, economic forecasts and historical data on previous crises.

International arrivals are expected to bounce back from different lows depending on different year-end levels defined by the 2020 scenarios. The extended scenarios are presented in terms of yearly totals, not growth.

International tourism could recover the levels of 2019 in a period of 2½ to 4 years based on a variety of factors including 1) the rate of improvement of traveler confidence, mostly dependent on perceived safety and the evolution of the pandemic, 2) the gradual elimination of travel restrictions and 3) the prevailing economic conditions. Over time, the first two factors are expected to support recovery, while the deteriorating economic environment could put growing strain on the rebound.

In the first year, all scenarios suggest comparable rebounds in absolute terms, though quite different in relative terms as the 2020 starting points vary considerably. Scenario 1 points to a recovery of 2019 levels in 2½ years, counting from the end of 2020 (by mid-2023). Scenario 2 suggest a recovery after 3 years (end of 2023) and Scenario 3, the slowest, after 4 years (end of 2024). The recovery times are summarized below:

- Scenario 1: recovery in 2½ years (mid-2023)
- Scenario 2: recovery in 3 years (end of 2023)
- Scenario 3: recovery in 4 years (end of 2024)

These recovery periods exceed in most part those seen in previous crises, both globally (11 to 19 months) and for the specific regions most hardly hit (1 to 3½ years).

As described in the May 2020 *UNWTO World Tourism Barometer*, it took eleven months for international arrivals to regain pre-crisis levels after the SARS epidemic of 2003, 14 months after the September 11th attacks of 2001, and 19 months after the global economic crisis of 2009. In the most impacted regions it took 1 to 3½ years for arrivals to climb back to the levels before the respective crises.

All scenarios for 2021-2024 point to a strong rebound in the year 2021 based on the assumption of a reversal of the evolution of the pandemic, significant improvement in traveler confidence and major lifting of travel restrictions by the middle of the year. The expected rebound is a consequence of the large pent-up demand following the unprecedented global lockdown and months of closed borders and travel bans.

Growth could remain in double digits in 2022 as international tourism continues to recover and travel conditions normalize, though at a slower pace compared to 2021. Despite the improvement, international arrivals are expected to remain below 2019 levels in 2021 and 2022 for all three scenarios, unless there is a major breakthrough in the treatment and prevention of COVID-19

World Tourism Barometer

Statistical Annex

Volume 18 • Issue 5 • August/September 2020

The following pages contain detailed tables on tourism related indicators such as international tourist arrivals, international tourism receipts and expenditure collected by UNWTO from national institutions.

Tables reflect yearly data and monthly or quarterly data currently available. Most data are preliminary and may be subject to revision. See the Methodological Notes at the end of this annex for further information on the data.

The tables on the following pages are not included in the free extract of the *UNWTO World Tourism Barometer*. The full document is available in electronic format for sale and free for UNWTO members and subscribers through the UNWTO elibrary at:

- English version: www.e-unwto.org/content/w83v37
- French version: www.e-unwto.org/content/t73863
- Spanish version: www.e-unwto.org/content/rn1422
- Russian version: www.e-unwto.org/content/j62835

Contents

Explanation of abbreviations and symbols used

- * = provisional figure or data
- | = change of series or methodology
- .. = figure or data not (yet) available
- n/a = not applicable

mn = million (1,000,000)

bn = billion (1,000,000,000) [note in Spanish 'miles de millones']

trn = trillion (1,000,000,000,000) [note in Spanish 'billones']

Q1: January, February, March

T1: From January to April

Q2: April, May, June

T2: From May to August

Q3: July, August, September

T3: From Sept. to December

Q4: October, November, December

H1: from January to June

H2: from July to December

YTD: Year-to-date refers to the change in the months with data available, compared to the same period of the previous year. The (sub)regional totals are approximations for the whole (sub)region based on trends in countries for which data is available.

Series of International Tourist Arrivals

TF: International tourist arrivals at frontiers (excluding same-day visitors);

VF: International visitor arrivals at frontiers (tourists and same-day visitors);

THS: International tourist arrivals at hotels and similar establishments;

TCE: International tourist arrivals at collective tourism establishments;

NHS: Nights of international tourists in hotels and similar establishments;

NCE: Nights of international tourists in collective tourism establishments.

Series of International Tourism Receipts and Expenditure

All percentages are calculated from non-seasonally adjusted series in local currencies, unless otherwise indicated:

\$: in US dollars; **€** in euros; **sa:** seasonally-adjusted series.

For more on concepts, definitions and computation of data, please see the Methodological Notes on page A-22.

The World Tourism Organization (UNWTO) is the United Nations specialized agency mandated with the promotion of responsible, sustainable and universally accessible tourism.

UNWTO's membership includes 159 countries, 6 Associate Members, two Permanent Observers, and over 500 Affiliate Members representing the private sector, educational institutions, tourism associations and local tourism authorities.

About the *UNWTO World Tourism Barometer*

The *UNWTO World Tourism Barometer* is a publication of the World Tourism Organization (UNWTO) that monitors short-term tourism trends on a regular basis to provide global tourism stakeholders with up-to-date analysis on international tourism.

The information is updated several times a year and includes an analysis of the latest data on tourism destinations (inbound tourism) and source markets (outbound tourism). The Barometer also includes a Confidence Index based on the UNWTO Panel of Tourism Experts survey, which provides an evaluation of recent performance and short-term prospects on international tourism.

The UNWTO Secretariat wishes to express its gratitude to those who have contributed to the production of this UNWTO World Tourism Barometer, in particular to institutions that supplied data, and to the members of the UNWTO Panel of Tourism Experts for their valuable feedback and analysis.

This report was prepared by the **UNWTO Tourism Market Intelligence and Competitiveness Department**, under the supervision of Sandra Carvão, Chief of the Department. Contributors include (in alphabetical order): Fernando Alonso, Michel Julian, and Javier Ruescas.

For more information including copies of previous issues, please visit: www.e-unwto.org/loi/wtobarometereng

We welcome your comments and suggestions at barom@unwto.org.

Data collection for this issue was closed early September 2020.

The next issue of the *UNWTO World Tourism Barometer* with more comprehensive results is scheduled to be published in October 2020.

(Data as collected by UNWTO, September 2020)

Methodological Notes

About the data

The monthly and quarterly statistics included in this issue have been compiled by the UNWTO Secretariat based on preliminary data reported by the institutions of the various countries and territories (e.g. National Tourism Authorities, Statistics Offices, Central Banks) through websites, news releases and bulletins, or provided through direct contacts with officials or through international organisations such as the Caribbean Tourism Organization (CTO), the European Travel Commission (ETC), Eurostat, the Pacific Asia Travel Association (PATA) or the South Pacific Tourism Organization (SPTO).

Information in this issue reflects data available at the time of publication. Data may be updated or revised without notice in future issues of the *UNWTO World Tourism Barometer* as it becomes available.

Countries that are not included, but which have monthly data at their disposal, are kindly requested to contact the UNWTO Secretariat at barom@unwto.org.

For major concepts, definitions and classifications in the measurement of tourism, please see the International Recommendations for Tourism Statistics 2008 (IRTS 2008) at www.unwto.org/methodology.

International Tourist Arrivals data

In the tables on International Tourist Arrivals for the various UNWTO regions, series are chosen that can serve as an indicator of trends in selected destinations.

The monthly series represented do not always coincide with the annual series usually reported for the various countries (e.g. visitor arrivals or nights instead of tourist arrivals) and sometimes only relate to a part of the total tourism flow (e.g. air traffic, specific entry points). See 'Explanation of abbreviations and symbols used' for more detailed information.

The (sub)regional totals are approximations for the whole (sub)region prepared by UNWTO based on trends in the countries with data available.

Data series for international tourist arrivals reported by France correspond to Metropolitan France

International Tourism Receipts and Expenditure data

For destination countries, receipts from international tourism count as exports in the balance of payments (travel) of each country and cover all transactions related to the consumption of goods and services by international visitors, such as accommodation, food and drink, fuel, domestic transport, entertainment, shopping, etc.

They include transactions generated by same-day as well as overnight visitors. Receipts from same-day visitors can be

substantial, especially in the case of neighbouring countries where shopping accounts for a large amount of spending by cross-border, same-day visitors.

International tourism receipts (travel) do not include receipts from international passenger transport contracted from companies outside the travellers' countries of residence, which are reported in a separate category (passenger transport).

For the (sub)regional totals, estimates are made by UNWTO for countries that have not yet reported results, based on the previous year's value and the trend for the (sub)region. Unlike arrivals, where revisions generally more or less balance out, receipts data tends to be revised upwards.

It should be noted that data as reflected by UNWTO on international tourism receipts and expenditure for China is based on the balance of payments (BOP) travel credit and debit (as with other countries for reasons of consistency and international comparability) reported by the State Administration of Foreign Exchange (SAFE) at www.safe.gov.cn/en/BalanceofPayments/index.html.

In addition, according to the International Recommendations for Tourism Statistics 2008 (IRTS 2008), the balance of payments includes both business and personal purposes in the "travel" item. Business travel covers goods and services acquired by persons going abroad for all types of business activities. Personal travel covers goods and services acquired by persons going abroad for purposes other than business, such as vacations, participation in recreational and cultural activities, visits with friends and relations, pilgrimages, and education and health-related purposes. The "travel" item does not include international passenger transport, which is reported in a separate category in the BOP, under "transport". For more information, please see the International Recommendations for Tourism Statistics 2008 (IRTS 2008) at: www.unwto.org/methodology and the IMF Balance of Payments and International Investment Position Manual (BPM6) at www.imf.org/external/pubs/ft/bop/2007/bopman6.htm.

It should also be noted that there is a difference in the data of UNWTO and those produced by the Ministry of Culture and Tourism of China (formerly the China National Tourism Administration) for 2014 and subsequent years.

Ranking of International Tourism Receipts and Expenditure

It should be noted that changes in the ranking of international tourism receipts not only reflect relative performance of the destinations, but also exchange rate fluctuations of the local currencies against the US dollar. Conversely, changes in the ranking of international tourism expenditure do not only reflect variations in spending on outbound travel, relative to other countries, but also changes in the value of the local currency compared to the US dollar.

In 2018 exchange rate movements were generally moderate, with the US dollar depreciating by 4% against the Euro. The US dollar-euro exchange rate moved from an average of 0.885 euro per US dollar in 2017 to 0.847 in 2018. Thus, the effect of converting tourism receipts earned in euros (by Euro area destinations) to US dollars was relatively small. The US dollar also depreciated by 3% against the UK pound and by 2% against the Chinese yuan and Japanese yen, among others. In these destinations tourism receipts expressed in US dollars were higher due to the exchange rates, though to a small extent. The US dollar however, did appreciate to different extents versus the currencies of large emerging markets, such as Brazil, Russia, and India, and quite sharply versus the Argentine peso due to the economic crisis in that country.

Exchange rates and inflation

With financial data measured in different currencies it is complicated to accurately determine variations in relative terms, as receipts have to be expressed in a common currency like the US dollar or the euro and generally are also reported at current prices, thus not taking account of exchange rate fluctuations and inflation.

Exchange rate changes can substantially influence the values in US dollars reported from year to year. When the

dollar appreciates against for instance the euro, worldwide receipts expressed in dollars relatively decrease, and vice versa in the case the dollar depreciates.

Exchange rate US\$ to euro and vice versa, average for the year

Year	USD to EUR	Change (%)	EUR to USD	Change (%)
2010	0.7543	5.2	1.3257	-5.0
2011	0.7184	-4.8	1.3920	5.0
2012	0.7783	8.3	1.2848	-7.7
2013	0.7530	-3.3	1.3281	3.4
2014	0.7527	0.0	1.3285	0.0
2015	0.9013	19.7	1.1095	-16.5
2016	0.9034	0.2	1.1069	-0.2
2017	0.8852	-2.0	1.1297	2.1
2018	0.8467	-4.3	1.1810	4.5
2019	0.8933	5.5	1.1195	-5.2

Note: Exchange rates are yearly averages. Source: Compiled from Eurostat

In order to account for exchange rate changes and inflation, international tourism receipts expressed in US dollar values (for reason of comparison) were converted back to the local currencies of each destination, weighted by the share in the total, and deflated by the relevant rate of inflation.
